

Dually Bag

The ultimate replacement for square bags, used in applications with voids larger than 12".

Technical Benefits vs Square Bag

- Verified Level 1 bags
- Independently verified by the AAR for method F-7 applications
- Operating Pressure = 2.8 PSI
- Burst Pressure = > 8 PSI
- Safety Factor = 3X
- Large surface coverage for maximum pressure exertion in large voids = better load force ratio
- Higher burst pressure = Overall better performance
- Verified pressure retention

User Benefits vs Square Bag

- Significant cost savings
- Lighter and easier to handle than square bag
- Fills quickly with dual inflation system or traditional single hose
- Gauge allows for accurate pressure measurement
- High burst pressure allows for increased safety during installation
- Significant increase in pallet quantities = lower freight costs and less storage space required
- Creates a true bulkhead
- Can be reused on over the road applications
